## 預防性單株抗體Evusheld說明

- ①可預防免疫低下族群SARS-CoV-2感染，並已取得我國食品藥物管理署核准專案輸入。
- ②經專家諮詢會討論後，建議若經主治醫師評估藥物的效益與風險並充分告知後，可考慮對同時符合下列條件之對象給予複合式抗SARS-CoV-2單株抗體Tixagevimab+Cilgavimab (Evusheld)作為暴露前預防：
  - 成人或  $\geq 12$  歲且體重  $\geq 40$  公斤，且；
  - 六個月內無感染SARS-CoV-2，且；
  - 一週內與SARS-CoV-2感染者無已知的接觸史，且；
  - 符合下列條件任一者：曾在一年內接受實體器官移植、血液幹細胞移植或CAR-T治療<sup>\*</sup>，具有效重大傷病卡之嚴重先天性免疫不全病患。

\*嵌合抗原受體T細胞療法，Chimeric antigen receptor T-cell therapy

A Delayed Immune Response Related to COVID-19

Children, adolescents, or young adults who develop certain symptoms after having COVID-19 might have MIS-C. They should see a doctor if they had COVID-19, or have been in close contact with someone who had COVID-19, within the past 6 weeks and now have the following:

Ongoing Fever

PLUS more than one of the following:

Go to the nearest hospital Emergency Room if your child is showing any severe MIS-C warning signs such as:

Trouble breathing | Pain or pressure in the chest that does not go away  
Confusion or unusual behavior | Severe abdominal pain | Inability to wake or stay awake  
Pale, gray, or blue-colored skin, lips, or nail beds; depending on skin tone

# 免疫負債Immunity debt

- The lack of immune stimulation due to the reduced circulation of microbial agents and to reduced vaccine uptake induced an “immunity debt” with a growing proportion of susceptible people.
- Non-pharmaceutical interventions limited the transmission of SARS-CoV-2 and reduced the spread of other pathogens despite school re-opening
